                                    validation_split = 0.30)
test_data_gen = ImageDataGenerator(rescale = 1./255,validation_split = 0.30)
```

```
training_set = train_data_gen.flow_from_directory(path,
                                                  target_size=(64,64),
                                                  batch_size=100,
                                                  class_mode='categorical',
                                                  shuffle=True,
                                                  color_mode='rgb',
                                                  subset = 'training')
```

```
testing_set = test_data_gen.flow_from_directory(path,
                                                target_size=(64,64),
                                                batch_size=100,
                                                class_mode='categorical',
                                                shuffle=True,
                                                color_mode='rgb',
                                                subset = 'validation')
```

```
Found 3024 images belonging to 5 classes.
Found 1293 images belonging to 5 classes.
```

3.Creating the Model

```
model = Sequential()
```

4.Adding the Layers (Convolution,MaxPooling,Flatten,Dense-(Hidden Layers),Output)

```
#convolution and Pooling layer 1
model.add(Conv2D(filters=48,kernel_size=3,activation='relu',input_shape=(64,64,3)))
model.add(MaxPool2D(pool_size=2,strides=2))
model.add(Dropout(0.2))

#convolution and Pooling layer 2
model.add(Conv2D(filters=32,kernel_size=3,activation='relu'))
model.add(MaxPool2D(pool_size=2,strides=2))
model.add(Dropout(0.2))

#Flattening the images
model.add(Flatten())

#Fully Connected layers
model.add(Dense(64,activation='relu'))
model.add(Dropout(0.2))
model.add(Dense(5,activation='softmax'))
```

```
model.summary()
```

```
Model: "sequential"

```

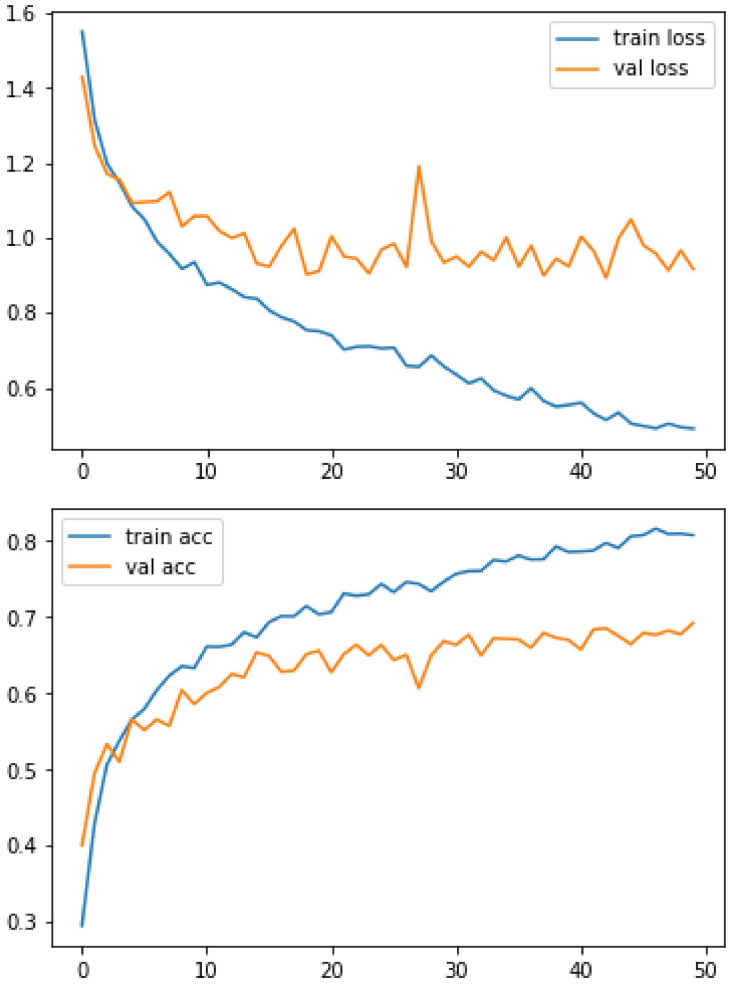
Checking Loss and Accuracy using Plot

```
#plot the loss
```

```
plt.plot(result.history['loss'], label='train loss')
plt.plot(result.history['val_loss'], label='val loss')
plt.legend()
plt.show()

# plot the accuracy
plt.plot(result.history['accuracy'], label='train acc')
plt.plot(result.history['val_accuracy'], label='val acc')
plt.legend()
plt.show()
```



7.Save the Model

```
model.save('flower.h5')
```

8.Testing the Model

```
training_set.class_indices
```

```
